

YOUR NAME

Software Engineer | Java & Spring Boot | Enterprise IT & Automation

London, UK | +44 7XXX XXX XXX | you@email.com | linkedin.com/in/yourname | github.com/yourname

PROFILE

Software and IT professional with 9+ years of experience across enterprise technology, application support, automation and Java development. Experienced in building and maintaining REST APIs and backend services using Java and Spring Boot, with additional expertise in application packaging, deployment and scripting. Comfortable working in Agile teams, collaborating with technical and business stakeholders, and learning new technologies quickly.

TECHNICAL SKILLS

Languages	Java, Python, PowerShell, VBScript, SQL
Backend	Spring Boot, Spring MVC, REST APIs, Maven, Gradle
Testing	JUnit, Cucumber, BDD, API testing
Tools	Git, GitHub, VS Code, Eclipse, IntelliJ IDEA, CI/CD concepts
Enterprise IT	Application packaging, MSI, SCCM, deployment, troubleshooting, automation
Practices	Agile/Scrum, code reviews, documentation, SDLC, defect resolution

PROFESSIONAL EXPERIENCE

Software Engineer / Java Developer

2022 – 2025

Financial Services Client / FDM Group — UK

- Developed and supported Java-based services within an enterprise financial technology environment.
- Built and enhanced REST APIs using Java, Spring Boot and Spring MVC, working with established application architecture and coding standards.
- Contributed to transaction reporting functionality and regulatory technology initiatives, collaborating with developers, testers and business stakeholders.
- Used Git, Gradle/Maven and automated testing practices; participated in Agile ceremonies, code reviews and defect investigation.
- Translated functional requirements into maintainable technical solutions and documented implementation details.

IT / EUC Engineer

2018 – 2022

Enterprise Technology Services — UK

- Supported enterprise desktop and application environments across packaging, deployment, configuration and troubleshooting activities.
- Created and maintained application packages using MSI and enterprise deployment technologies.
- Developed PowerShell and VBScript automation to reduce repetitive support and deployment tasks.
- Investigated application issues, coordinated fixes and worked with technical teams to resolve incidents within agreed service levels.

Application Packaging / IT Engineer

2015 – 2018

Technology Services — India

- Packaged, repackaged and tested Windows applications for enterprise deployment.
- Worked with MSI technologies, scripting and software distribution processes to support reliable application releases.
- Performed application testing, troubleshooting and documentation across development and deployment environments.

SELECTED PROJECTS

Customer Profile REST API

2026

Java / Spring Boot project

- Implemented a customer profile update endpoint following RESTful API conventions and existing service-layer patterns.
- Worked with validation, error handling and structured application responses, including not-found and duplicate-email scenarios.
- Used Git branching and pull-request based development practices.

AI-Assisted Banking Platform

2026

Java / Spring AI learning project

- Built a learning project exploring Spring AI, customer registration/login workflows and AI-assisted development practices.
- Used GitHub and AI coding tools to accelerate implementation while reviewing generated code for correctness and maintainability.

EDUCATION & TRAINING

Java Full-Stack / Software Engineering Training — FDM Group, UK

Java, Spring Boot, REST APIs, testing, Agile development and enterprise software practices.

Additional Professional Training — Enterprise IT, application packaging, automation and software deployment
